EDUCATION

- **Chandigarh University** Mohali, India
Bachelor of Engineering - Computer Science Engineering; GPA: 8.00 July 2023 - June 2027
Courses: Operating Systems, Data Structures, Analysis Of Algorithms, Automata, Computer Architecture, Networking, Databases

SKILLS SUMMARY

- **Languages:** C, C++, JavaScript, Python, Java
- **Frameworks:** ReactJs, NextJs, Typescript, ExpressJs, NodeJs, Shadcn
- **Tools:** Postman, Docker, Git, MongoDB, MySQL, Github
- **Soft Skills:** Leadership, Event Management, Writing, Public Speaking, Time Management

EXPERIENCE

- **Girlsript Summer of Code** Remote
Student Developer Aug 2025 - Sep 2025
 - **Maintainence of code:** Collaborating with project maintainers and fellow contributors to build real-world open-source software. Working on bug fixes/features/docs, using Git/GitHub, and enhancing skills in team-based development.
 - **Active interaction:** Actively engaged in coding challenges and community initiatives to promote learning and inclusivity in tech..
 - **Document Redesign and structuring:** Improved project documentation, API references, and onboarding guides to enhance contributor experience and reduce ramp-up time.

PROJECTS

- **OwlOps – Self-Hosted Observability Tool(React, TypeScript, Node.js, Express, SQLite, Docker):** GitHub
 - Built a privacy-first observability platform that improved service visibility and helped reduce downtime by 25% through proactive monitoring.
 - Engineered real-time SSE-based event streaming, cutting monitoring latency by 40% and enabling instant detection of service failures.
 - Designed a robust monitoring engine with recursive scheduling, ensuring deterministic health checks while preventing overlapping requests.
 - Developed a containerized, production-ready system with Docker and SQLite, supporting lightweight deployment, persistent storage, and automated alerting via SMTP.
- **Reddit clone –Springboot API (Java, Spring Boot, Spring Security, JWT, Hibernate/JPA, MySQL):** GitHub
 - Architected a stateless RESTful backend using Spring Boot with layered design (Controller–Service–Repository), enabling scalable and maintainable system structure.
 - Implemented JWT-based authentication with refresh token rotation and role-based authorization using Spring Security, eliminating server-side sessions for horizontal scalability.
 - Optimized high-read workloads (posts, comments, votes) through indexed MySQL schema design, efficient JPA mappings, and paginated query handling via Spring Data Pageable
 - Improved API responsiveness by leveraging asynchronous processing and transactional safeguards to handle concurrent vote updates and background tasks..
- **Detro - Delhi Metro Navigation System (React, Next.js, TypeScript, Tailwind CSS, Framer Motion, Supabase):**
 - Engineered a metro route-planning application covering 350+ stations, implementing optimized pathfinding logic for intelligent route computation and interchange handling.
 - Integrated Supabase for authentication, database storage, and real-time updates for live service notifications.
 - Built a modular component-based architecture using React and TypeScript for type safety and maintainability.
 - Ensured responsive design across mobile and desktop devices using Tailwind CSS utility-first styling.

HONORS AND AWARDS

- Secured highest grade in Statistics during 4th semester -July, 2025
- Second Runner's Up at Codefiesta Hackathon - November, 2025
- Solved around 500+ question around different platform like leetcode, codeforces, hackerrank

VOLUNTEER EXPERIENCE

- **Telephonic Team Lead at University cultural event** Mohali, India
Send remainder and invitation to all the participants for smooth conduct of the event Dec 2024
- **Event Organizer at Google Developers Group CU** Mohali, India
Organized events, conducted workshops and delivered workshops reaching over 7000 developers. July 2025
